

1. Create an empty String ArrayList
2. Add the three strings "x" "y" and "z" to the ArrayList
3. Create the string array
  - a. `String myString = {"a", "b", "c", "d", "e"};`
4. Add the contents of the array to the ArrayList using the first method I showed near the end of the ArrayList lesson.
5. Add the three strings "m" "n" and "o" to the ArrayList
6. Print the ArrayList followed by "The size of the ArrayList is "
7. Get the elements in first, fifth, and last index of the ArrayList and print them
  - a. "The first element is " ... "The fifth element is " ... "The last element is "
8. Set the fifth element to "g" and print the ArrayList
9. Remove "b" and "o" print the ArrayList and then "The size of the ArrayList is "
