

You will now create a driver program that will run your Student_V2 class.

Name this class Student_V2_Driver

This program will create a student for each constructors in your student class.

This program will test the methods for the first 2 classes for all 4 quarters (all of the values for the first two classes will be set so none of them should be -1).

You will not need to test the semester1GPA() and the semester2GPA() since you will not have all of the grades for all of the classes to do these 2 methods

Extra Credit (+50)

If you update all of the grades for all of the classes and then do the methods semester1GPA() and the semester2GPA().
